

IFC Cambricon-LLM Simulator Stack

Paper-facing TPOT is produced by the C LLM operator trace; SSDsim-derived, C++ and SystemC paths validate representative IFC command-cycle behavior.

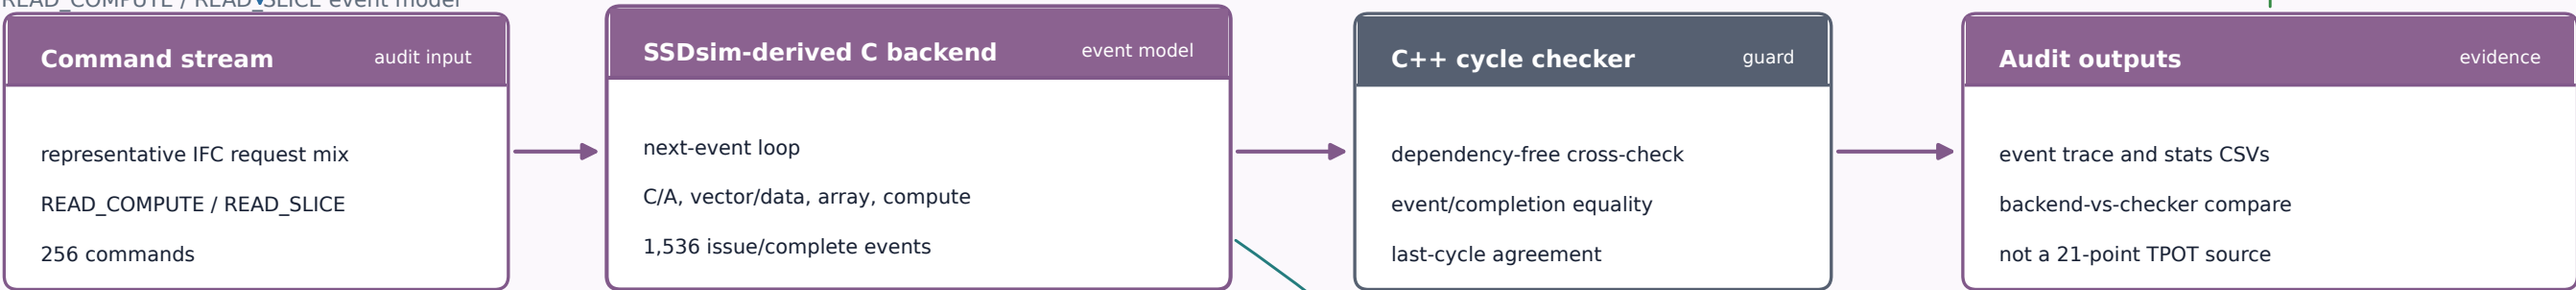

A. Paper-facing reproduction path

owns Figure 9 token/s and TPOT

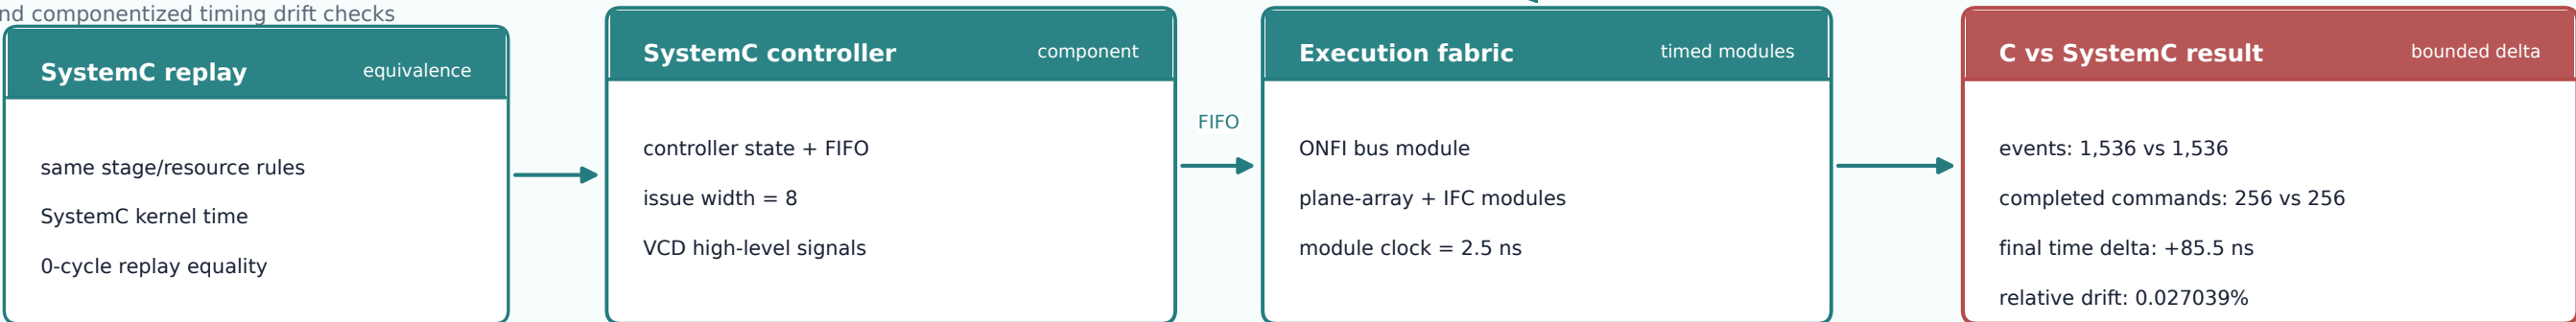

B. SSDsim-derived command audit

representative READ_COMPUTE / READ_SLICE event model

C. SystemC command-cycle validation

kernel replay and componentized timing drift checks

paper-facing C timing path

DRAM/NPU budget path

SSDsim-derived C audit

SystemC validation

bounded timing drift
